# Why Fume Extraction?

Many work environments today, including soldering and adhesives application, create particles and gases that can be harmful to the work place and the environment. Most people think that the move to leadfree soldering would be more nature friendly. In reality leadfree soldering smoke emissions contain more breathable fine dust particles. More smaller particles are produced due to higher working temperatures required and because more flux is used in the soldering process.

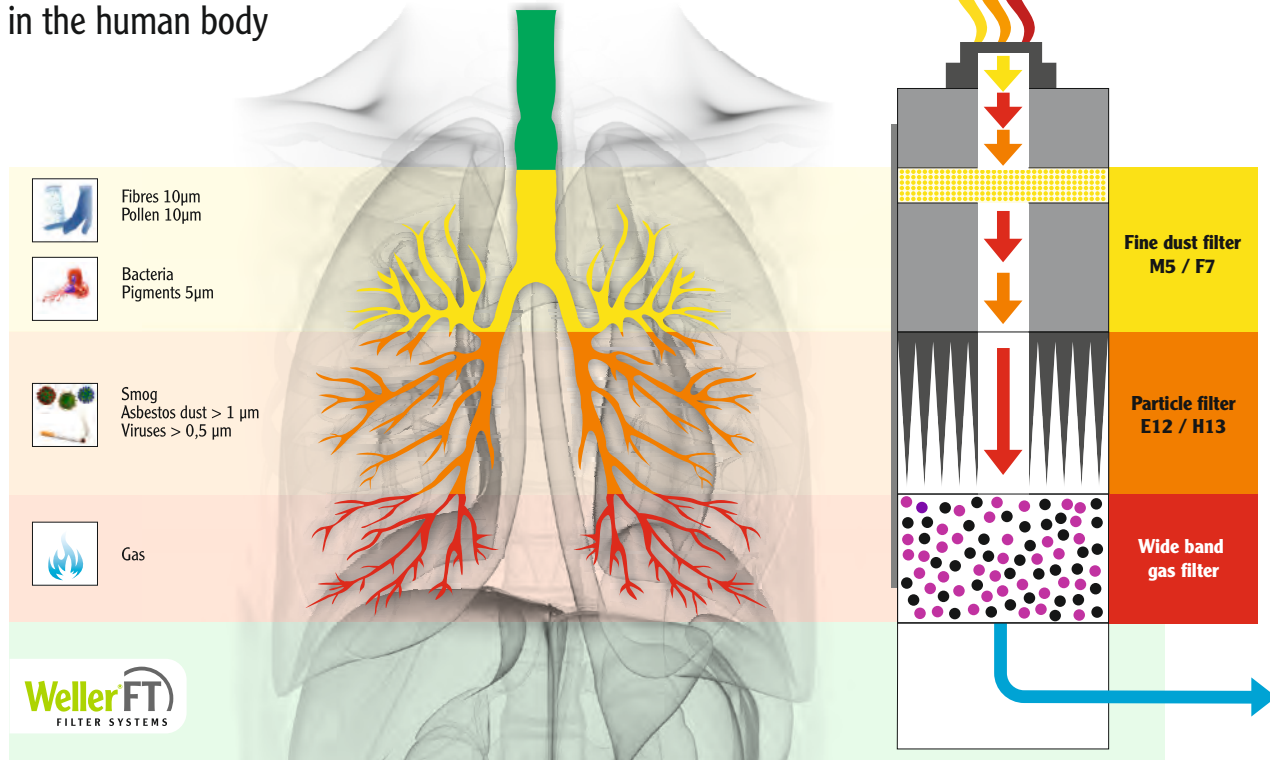

In many countries legal regulations governing clean air in the work place require that hazardous substances are removed from the air in order to avoid harmful effects on people and machines.

It is important to use the correct safety equipment to remove these hazardous substances. Inhaling fine particles is more dangerous than big particles as these get caught more easily and block the alveoli in the lungs.

To protect the operator it is important to use an extraction system that is able to separate these particles and gases and then re-circulates the cleaned air back into the work place. This also saves energy and reduces energy costs.

- > The smaller particles are, the deeper they penetrate into the respiratory system
- > The deeper particles penetrate, the higher are the health risks
- > The smallest particles travel via alveoli into the bloodstream

WellerFT offers two types of Fume Extraction solutions:

## Volume Extraction

ESD safe

Set up your volume extraction solution with our configurator [www.weller.eu](http://www.weller.eu)

- > Large areas can be covered
- > Low maintenance
- > Mobile
- > Quick & easy installation
- > Economic for 1 to 8 work places
- > Extraction cabinets
- > Remote control

More suitable for applications involving, for example hand soldering, solder baths, hot air soldering, micro solders and gluing and cleaning work. WellerFT offers various mobile systems up to a maximum of 8 workplaces that purify the air.

### For 1 extraction arm Ø 60

Volume flow rate = 50–80 m<sup>3</sup>/h  
Underpressure = 300–700 Pa

### For 6 extraction arms Ø 60

Volume flow rate = 300–480 m<sup>3</sup>/h  
Underpressure = 300–700 Pa

## Tip Extraction

ESD safe

- > Low investment per work place
- > Extract pollution direct at the source
- > Up to 20 soldering points with one system (max. 200 m apart)
- > Ergonomic with easy access to work piece
- > No noise
- > Minimal air movement

WellerFT FE (Fume extraction) soldering irons have a smoke tube integrated into the handle. When soldering the tube is positioned directly above the tip and collects any fumes produced. Fume extraction attachments can be retro fitted to non fume extraction Weller soldering irons.

### For 1 FE soldering iron

Volume flow rate = 1–1,5 m<sup>3</sup>/h  
Underpressure = 10.000 Pa

### For 25 FE soldering irons

Volume flow rate = 25–30 m<sup>3</sup>/h  
Underpressure = 10.000 Pa

# Filter Technology

**WellerFT Zero-Smog® Systems** are specifically designed for continuous operation in industrial environments. Care and attention at the design stage plus careful component choice and a high quality manufacturing process have given Weller extraction systems a world wide reputation for reliability and longevity.

WellerFT Zero-Smog® Systems have a **three stage filter system (excl. MG 100S)** for removing small particles, fumes and gases that are produced in different working processes:

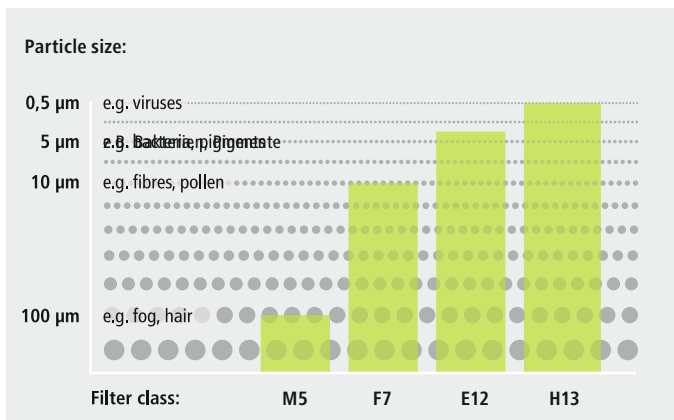

The hazardous substances are efficiently captured by the nozzle and are absorbed into the filter.

Bigger particles get caught in the pre-filter and smaller particles get caught in the HEPA (High Efficiency Particulate Air) filter.

The wide band gas filter removes fumes and adhesives.

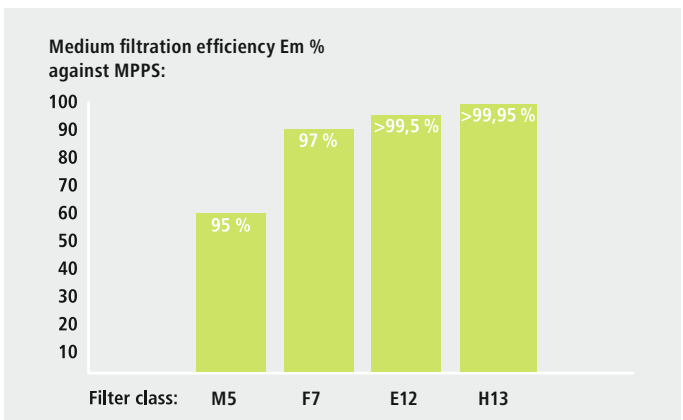

End product – clean air – is re-circulated into the workplace.

Filter Class	Recommended Application
M5	For standard applications
F7	For applications with high flux or dust content
E12 / H13	For applications with high flux or dust content
Gas	For applications with extracting adhesive fumes and solvents applications

Filter Class M5, F7: Fine dust filter as per EN 779:2012

Filter Class E12/H13: According EN 1822:2009 HEPA (High Efficiency Particulate Air) Filter

## Special Filter

### Cleanroom Filter

Filter for use in cleanroom

### VOC Filter

Filter for solvents

### MEK Filter

Filter for Methyl, Ethyl, Ketone

### Adhesive Fume Filter

Filter for gluing and dry processes

Before using special filters MSD sheet must be checked. Please contact WellerFT for support.

### 1. Medium / fine dust filter

For standard applications with a small amount of flux and pollution gases with high solid content, WellerFT offers filter classes M5 or F7.

### 2. Compact filter consisting of:

**Particle filter** H13 with deposition performance according EN 1822:2009  
 > 99,95 % in MPPS (particles 0,16 µm)  
 > 99,994 % particles 0,3 µm

### Wide band gas filter

For cleaning harmful fumes and vapours. The WellerFT wide band gas filter consists of **50 % active carbon and 50 % Chemisorb (potassium permanganate)**. Harmful gases with a high molecular weight are cleaned by the active carbon. Chemisorb is suitable for absorbing gases of lower molecular weight. Because of its composition, Chemisorb is able to convert a large number of chemical pollutants (e.g. formaldehyde) by means of molecular modification into non-polluting gases.

### 3. Gas filter (option)

The gas filter is used for extracting adhesive fumes and solvents. Experience has shown that filtering suspended particles is not so vital in this respect. The gas filter is filled with **50 % active carbon and 50 % Chemisorb**. The particle filter is omitted.

## Filter classification according EN norm EN 1822:2009

Filter Class	Recommended Application
M5	For standard applications
F7	For applications with high flux or dust content
E12 / H13	For applications with high flux or dust content
Gas	For applications with extracting adhesive fumes and solvents applications

Group	Filter Class	Integral value	
		Degree of separation	Transmittance degree
EPA	E10	85 %	15 %

# Volume extraction

- › Volume extraction is the best choice where extraction over a wide area is required.
- › It is an economical way to eliminate polluted process air as there is no need for fixed installations and maintenance requirements are minimal.
- › Arms and nozzles do not require daily cleaning.
- › Energy costs are saved because the cleaned air is re-circulated back into the work area and does not need to be heated or cooled like external air.
- › Weller has a broad range of filter units for volume extraction applications
- › Speed control allows optimal air flow regulation for each working place independent of the connected workplaces (excl. ZS 2).
- › Units can be remotely controlled via a remote control system (available as accessory) or by a PC (RS232) connection (excl. ZS 2)
- › Easy-Click-System for fast and easy installation of workplaces

## Characteristics

- > For applications where extraction over a wide working area is required
- > Mobile units suitable for stand alone and central applications
- > All units equipped with maintenance free brushless turbine
- > Connectable to external air outlet (only ZS 4V/6V)
- > Vacuum up to 4.200 Pa and high volume for efficient volume extraction
- > Maximum bridging distance 30 m (Zero Smog 6V using Weller pipe system 70) equally distributed to all connected extraction device
- > Cost saving through automatic air flow control which provides each workplace with intelligent air flow regulation regardless of the connected workplaces (excl. ZS 4V/6V)
- > Filter condition monitoring on the unit or by remote control (accessory)

## Areas of application

- > Hand soldering processes
- > Soldering machines, robots, solder baths
- > Adhesive fumes
- > Clean room applications (on request)
- > Microscope workplaces
- > Other fume emitting processes

# Zero Smog 6V

## Applications:

- > Hand soldering
- > Heavy duty and general soldering
- > Gluing, cleaning, filling
- > Fine dust
- > MEK
- > VOC
- > Clean room

## Pre-filter to extend capacity of Zero Smog 6V and WFE 4S

The Pre-filter is recommended for use with solder bath, automatic soldering or other major dust emitting applications. It acts as a first stage in the filter process increasing the lifetime of the main filter units. The Pre-filter can be fixed directly to the top of the ZS 6V or in conjunction with all WellerFT volume extraction units as an external part of the fume extraction system.

### Scope of supply

- > Filter box
  - > 1 x Easy Click 60 connector
- Filters must be ordered separately (see page 48)

Order No. T005 87 358 62

The fume extraction system Zero Smog 6V (ZS 6V) is user-friendly with quick and simple installation and filter exchange. It has a low noise emission level and is small and convenient to locate within the work area.

The high quality components used in the ZS 6V result in low servicing requirements and long system life. To increase filter lifetime and save on energy, the ZS 6V is fitted with a constant flow control (CFC) – depending on the number of connected workplaces. To extend the capacity an external pre-filter can be fixed directly to the ZS 6V.

The powerful maintenance free variable speed turbine is electronically controlled and has a maximum blower capacity of 645 m<sup>3</sup>/h. It has 3 operating modes:

1. Standard speed control – selected by the user irrespective of the load on the system.
2. Speed limiting control – the turbine speed is automatically varied to match the load on the system.
3. Economy control – the rate of fume absorption is maintained at a constant value. The operating hours and the filter condition are recorded for maintenance purposes.

# Installation Options with Easy-Click-System

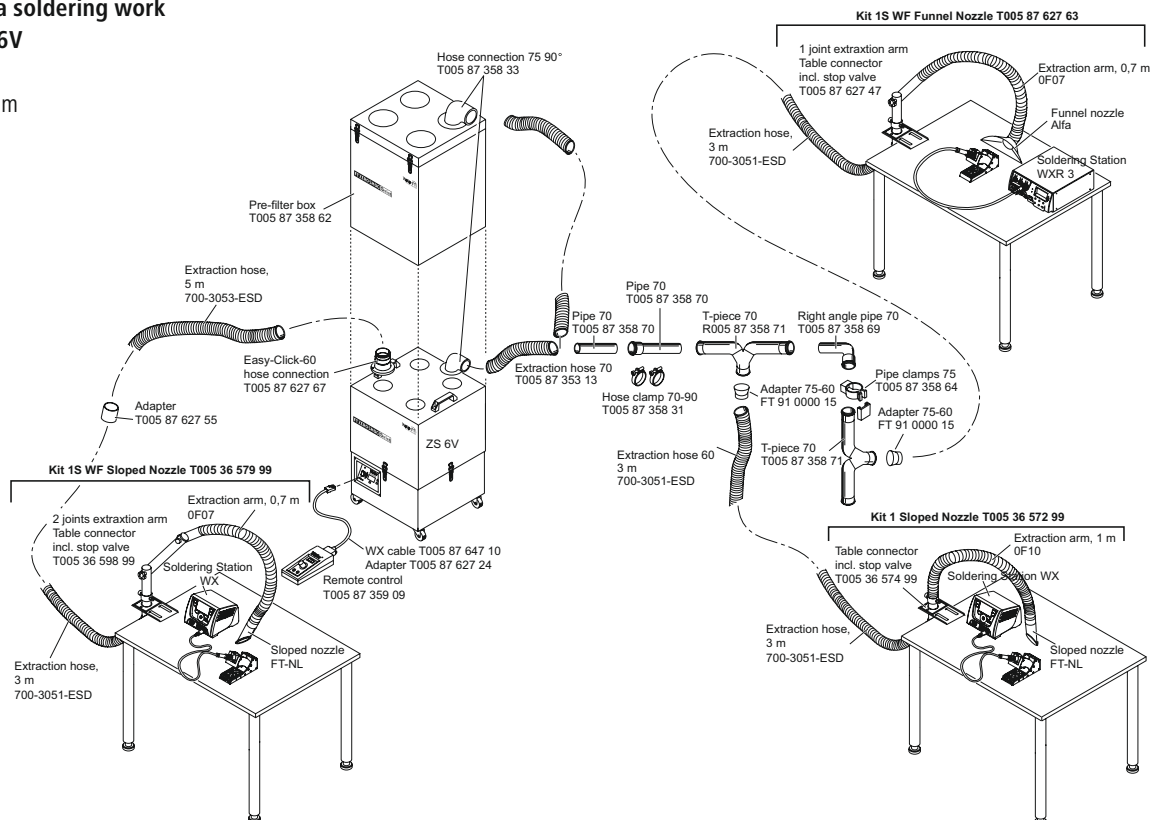

## Installation option for a central system on a soldering work bench with Zero-Smog 4V

Total pipe length max. 15 m (590.55 in)

## Installation option for a central and stand alone system on a soldering work bench with Zero-Smog 6V

Total pipe length max. 30 m (1181.10 in)

## Applications:

- > Soldering
- > Gluing, cleaning, filling
- > Laboratories

The air curtain cabinet CBC-A has a unique ventilation concept that separates the operator from the process by a dual air curtain system, giving unlimited accessibility on the workbench. It stands directly on the workbench and is easily connected to WellerFT mobile filter system or to central ventilation.

# Acryl Exhaust Cabinets

The ESD safe **WESDA Acryl exhaust cabinets** are designed to store components during the drying time after gluing or epoxy resin filling processes. The gas emissions are extracted by an extraction unit connected via an easy click 60 hose adapter at the back of the cabinet.

# Tip Extraction

Weller FE (Fume Extraction) soldering irons have a smoke tube adapted to the handle. When soldering the tube is positioned directly above the tip and collects any fumes produced. Fume extraction irons can be connected to the Weller FT 12 and WFE P / WFE2P systems (both table top units driving up to 2 irons) or ZS 20T – a mobile unit driving up to 20 irons.

A safety rest with Stop + Go function switches the extraction system on when the FE soldering iron is removed from the safety rest and off after a short delay when the iron is replaced (WFE P / WFEP2) and FT 12). Fume extraction attachments can be retro-fitted to non fume extraction Weller soldering irons.

## Characteristics

- > FE (Fume Extraction) soldering irons extract fumes directly at the soldering tip.
- > Less airflow and high vacuum, up to 12.000 Pa for efficient fume extraction.
- > Maximum bridging distance 200 m (656 ft.), ZS 20T requires Weller pipe system 50.
- > Filter condition warning – LED on the unit or remote control via RS 232 and PC (ZS 20T).
- > Variable electronically controlled pump speed, adjustable at the unit or by remote control via RS 232 and PC (ZS 20T).

## Areas of application

- > Hand soldering

**WFE P / WFE2P**

up to 2 workplaces

**FT 12**

up to 2 workplaces

**Zero Smog 20T**

up to 20 workplaces

## FT 12

Small, portable, compressed air driven fume extraction unit

low sound level

### Technical Data

Maximum capacity	2 FE soldering irons
Noise level	< 37 db (A) at 1 m distance
Maximum vacuum	20.000 Pa
Operating pressure	3,5–7 bar
Air consumption	27 l/min
Height	200 mm
Diameter	120 mm
Weight	1,7 kg

### Scope of supply

- > FT 12 Fume extraction unit
- > Compressed air cleaning filter
- > Compact filter consists of: Particle filter H13, Wide band gas filter (50 % active carbon, 50 % Chemisorb)
- > Fine dust filter F7

	Order No.
Throttle valve FT 12	300-2000
Hose set FT- and FE-series	300-2001
Ejector for FT 12	300-2002

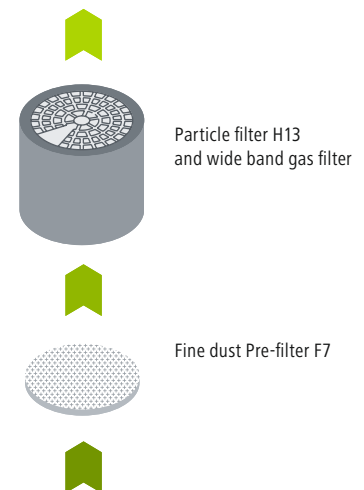

### Attributes

- > Up to 2 FE soldering irons can be connected
- > Maintenance-free compressed air converter
- > Portable unit for stand alone applications
- > for industrial long term use

The fume extraction unit FT 12 requires clean and oil-free compressed air. The vacuum is generated by a maintenance-free compressed air converter. The contaminated air is purified by a pre-filter and main filter system. A compressed air cleaning filter removes additional odours caused by the compressed air. This highly efficient filter system makes the FT 12 a genuine air recovery system.

The FE (Fume Extraction) soldering irons are connected directly to the unit – additional leads are not required.

# WFE P / WFE2P

Small, portable, electrically driven fume extraction unit

### Attributes

- > Up to 2 FE soldering irons can be connected
- > Electric vacuum pump to produce the required vacuum
- > 2 power stages for higher extraction performance with 2 FE soldering irons
- > Portable unit for stand alone applications

The Weller WFE P is a line voltage fume extraction unit designed to run with one or two FE (Fume Extraction) soldering irons. The WFE P has an electric, long-life, soundproofed vacuum pump to produce the required vacuum – it does not need a compressed air supply. The vacuum pump has two power settings which can be selected by means of rocker switches depending on the number of FE soldering irons connected to the unit. This saves energy. The motor is maintenance-free and has a thermal over load to protect the unit. The filter lift system allows fast and convenient main filter replacement.

FE soldering irons are connected directly to the unit – additional leads are not required.

ESD safe

low sound level

### Technical Data

Maximum capacity	2 FE soldering irons
Noise level	< 45 db (A) at 1 m distance
Operating voltage	230 V / 50 Hz 120 V / 60 Hz (USA)
Power input	70 W
Maximum vacuum	30.000 Pa
Height	295 mm
Diameter	140 mm
Weight	4 kg

## Zero Smog 20T

Mobile, powerful, electronically driven fume extraction unit

ESD safe

low sound level

Up to 6 WellerFT (Fume Extraction) soldering irons can be connected directly to the fume extraction unit ZS 20T. Using the Pipe System 50 (available as accessory) up to 20 FE soldering irons can be supported by the unit. The powerful maintenance-free turbine generates a vacuum of 10.000 Pa and is

electronically controlled. Operating hours and filter contamination level are also recorded electronically.

The filter system achieves a filtration rate of 99,95 % as per EN 1822 with a particle size of 0,16 µm.

### Technical Data

Maximum capacity	20 FE soldering irons
Noise level	< 51 db (A) at 1 m distance
Operating voltage	230 V / 50 Hz, 120 V / 60 Hz
Power input	630 W
Maximum vacuum	10.000 Pa
Maximum delivery rate	100 m <sup>3</sup> /h
Dimension (L x W x H)	450 x 450 x 695 mm
Weight	45 kg

### Scope of supply

Order No. 230 V T005 36 706 99

Order No. 120 V (USA) T005 36 702 99

### Attributes

- > Up to 20 FE soldering irons can be connected
- > Electric driven, maintenance free turbine produces the required vacuum
- > 4 wheels to allow easy movement of the unit
- > Mobile unit for central and stand alone applications
- > Central installation for pipe systems up to 200 m (656 ft.)

### Characteristics

- > **Two operating modes:**  
Mode 0: Vacuum regulated to 10.000 Pa  
Mode 1: Extraction performance can be set between 20 %–100 % with the control buttons.
- > Electronic filter check (LED) through differential pressure measurement. If the specified degree of contamination is exceeded, the unit switches off.
- > Electronic filter operation status display. For better management of filter change intervals – the filter operating hours can be pre-specified. The need for filter change is indicated in good time allowing adequate time for filter procurement and replacement.
- > Interface RS 232 for remote monitoring or remote control. Remote control available as accessory.

## FE (Fume Extraction) Soldering Irons

The smoke absorption tube is integrated into the handle. It can be placed over the joint when soldering but can be retracted when access to the joint is a problem and can also be removed for cleaning. FE 75 iron is temperature controlled, ergonomic and allow precise handling. These electronically controlled iron can be driven from any Weller FE 80 W power

unit compatible with the rating of the iron or any Weller station. The range of iron power ratings and the extensive range of solder tips mean that there is an iron to suit all applications. The FE soldering irons are supplied with a burn proof hose 5 mm (0.19 in) diameter, 2,5 m (8.2 ft.) long.

T005 36 338 99	<b>Connection nipple</b> for Ø 5 mm (0.19 in) extraction hose to connect FE soldering irons directly to pipe system 50. The connection nipple is screwed at any point into the pipe system. (metric thread M8 x 1)
T005 87 350 50	<b>End cap</b> to close off to connection nipple 5 mm
T005 87 628 10	<b>Connection adapter</b> for ZS 20T (including 3 x end cap), 3 x 5 mm hose

## Safety Rests with Stop+Go function for FE Irons with FT 12 or WFE P

The Weller safety rests with Stop+Go function are recommended accessories for FE irons using the WFE or WFE P extraction units. A fibre optic sensor switches the extraction unit on when the FE iron is removed from the safety rest and when the FE iron is replaced in the safety rest, after a short delay to gather the fumes from any solder on the tip it switches the unit off. This reduces running costs.

Order No.	Description

## Cord Support

The cord support keeps the soldering iron cord out of the direct working area. This allows easier handling of the soldering iron.

Order No.	Description
T005 15 066 99	<b>Cord support</b> for safety rest KH 20/23

## Pipe System 50 Tip Extraction

Tip extraction systems demand a high quality, constant level of vacuum across the installation. To achieve this it is necessary to use a pipe system with a relatively small diameter. The Weller pipe system 50 allows extraction **installations of up to 200 m (656 ft.)** when used with the ZS 20T unit in a stand alone system. The pipe sections are designed to join together and have internal sealing bushes. In a central system, the FE soldering irons are connected directly to the fume extraction units.

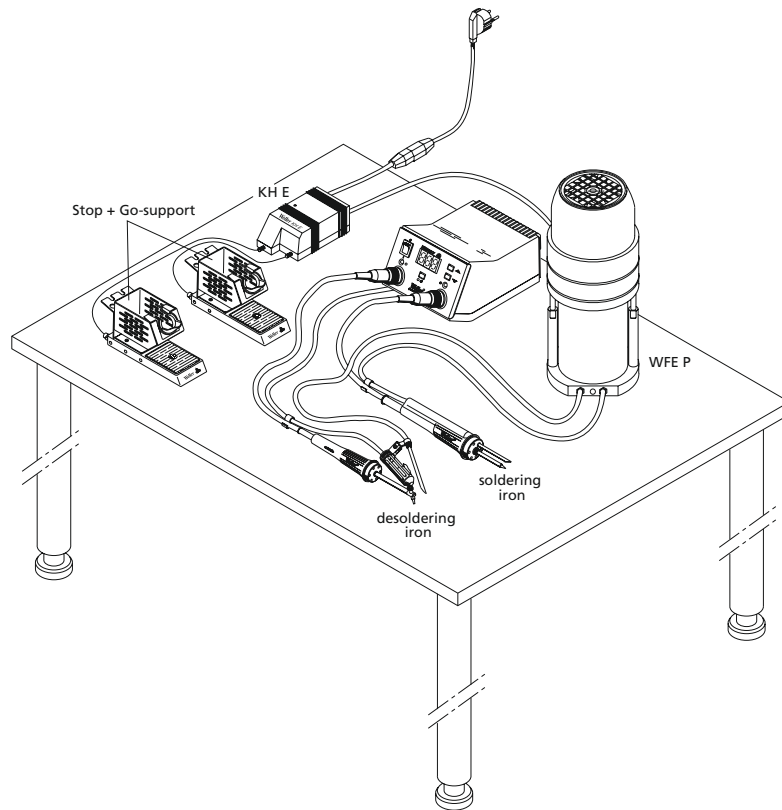

## Pipe System 70 Volume Extraction

Volume extraction systems require a large volume of air to be extracted and the level of vacuum is of lesser importance. This means that a relatively large diameter pipe system is required. If the pipe diameter is too small the flow resistance is increased and extraction capacity reduced. The pipe system 70 allows **installations up to 30 m (99,26 ft.)** with the WFE 4S used in a stand alone system. The pipe sections are designed to join together and have internal sealing bushes.
